The background of the slide features a grayscale photograph of a warehouse interior. It shows several rows of mobile shelving units, which are tall metal frames with multiple horizontal shelves. One unit in the foreground is slightly offset, revealing the tracks on the floor that allow the units to move. The lighting is bright, creating soft shadows. In the top right corner, there is a solid red rounded rectangle. On the right side, there are thin gray lines forming a partial frame or corner indicator.

MAXIMIZE SPACE. OPTIMIZE ACCESS. SIMPLIFY STORAGE.

Say goodbye to wasted floor space and inefficient storage. Our Slide Store, Lateral Mobile Shelving System offers a smarter, more streamlined solution to traditional shelving by significantly increasing your storage capacity without increasing your footprint.

WHY SETTLE FOR STATIC SHELVING?

Conventional shelving systems leave you with wasted space between aisles. Mobile shelving eliminates those unused aisles, allowing you to double your storage capacity or use half the floor space to store the same volume—dramatically increasing space efficiency and reducing costs.

BUT WE TAKE IT ONE STEP FURTHER.

Unlike traditional mobile systems that move back and forth along a track, Lateral Mobile Shelving moves side-to-side, giving you faster, easier access to stored items. This makes it the ideal solution for compact, high-traffic environments where quick picking and retrieval is essential.

WHY SLIDESTORE OUTPERFORMS THE REST

Maximize Storage Density

- Achieve up to 3x the storage capacity of static shelving in the same footprint.
- Eliminate fixed aisles entirely—no wasted space, no compromises.
- Ideal for tight spaces like storerooms, archive rooms, medical supply areas, or file storage.

Modular, Expandable & Future-Proof

- Start small and expand later
- Easy to reconfigure, relocate, or upgrade as your storage needs evolve.

Pick Faster, Work Smarter

- Items stored at the front are immediately accessible.
- Rear rows are quickly reached by sliding units laterally—no aisle creation needed.
- Improves picking speed, especially in environments with high retrieval frequency.

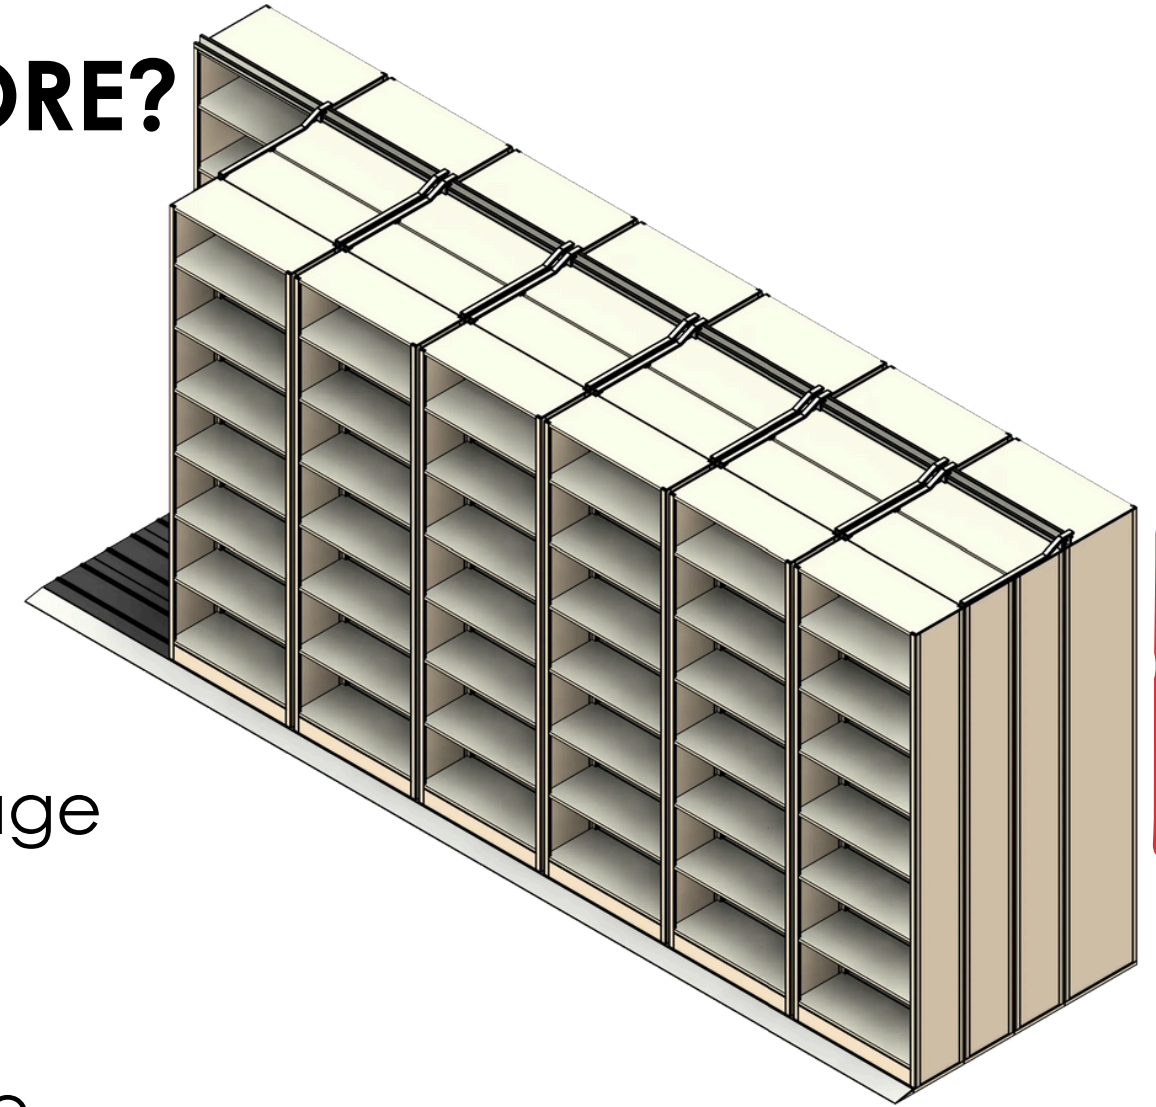

Strong, Safe & Secure

- Carriages are constructed from lightweight but strong steel.
- Anti-tip “C” channel track system ensures safe operation—even during full lateral movement.
- Add lockable doors or drawers for security and privacy.

WHO SHOULD USE SLIDESTORE?

Perfect for:

- High Value areas
- Long term storage
- Medical and pharmaceutical storage
- File and document archiving
- Parts and component bins
- Office and administrative storage
- Stockrooms and back-of-house storage

If you're working with limited space, need high-speed access, or want to increase storage capacity without costly renovations or expansions, lateral mobile shelving is the ideal solution.
